

Quang Le

SENIOR SOFTWARE ENGINEER · CRYPTO & DeFi · EXCHANGE SYSTEMS

+84 354 669 714 levuquang2k1@gmail.com quangxbt quangvnu

SUMMARY

Founding engineer who built two crypto exchange products from the ground up: a perpetual futures exchange shipped to production and a custody-backed spot platform. Previously built the matching engine for a perpetual DEX that surpassed **\$15B in cumulative volume** and matched **30B+ orders** at **~10ms latency**. 6 years building exchange infrastructure, DeFi protocols, and high-throughput systems in Go and Solidity.

EXPERIENCE

Stealth Startup

Remote

FOUNDING ENGINEER / Go, Solidity, PostgreSQL, Redis, NATS, AWS

Jun. 2025 - Jun. 2026

First engineering hire. Built two product lines from the ground up: a perpetual futures exchange shipped to production, and a custody-backed spot trading platform.

- **Perp backend.** Architected the off-chain matching and on-chain settlement backend across 14 Go microservices. Built the liquidation engine, risk engine, oracle aggregation from 7+ providers, and conditional order service.
- **On-chain protocol.** Single-handedly built the entire perpetual exchange smart contract system covering order matching, settlement, funding rates, vault staking, and cross-chain deposits.
- **APAC equities.** Pioneered on-chain perpetuals for traditional equities. Shipped 10+ Japanese, Korean, and Chinese stock markets, expanding the platform beyond crypto into TradFi.
- **Custody platform.** Built multi-chain custody from scratch (EVM, Bitcoin, Solana). Key management in AWS Nitro Enclaves with hardware attestation, extended with HSM and in-house key vault for on-premise deployment.
- **Fund flow & accounting.** Built the full deposit-to-withdrawal pipeline: indexing, sweeping, archiving, and transaction signing with multi-admin approval. Designed a double-entry ledger with blockchain data ingestion, running balances, and hourly snapshots for reconciliation.
- **Exchange backend.** Built the spot trading engine, real-time WebSocket, NATS-based event sequencing with leader election, and market-making bots supporting 20+ products.

BSX

United States (Remote)

SENIOR SOFTWARE ENGINEER / Go, Python, Apache Kafka, PostgreSQL, Redis, AWS

Sep. 2024 - Sep. 2025

- **Matching engine.** Architected and built the order matching engine powering BSX, a perpetual DEX on Base that surpassed **\$15B cumulative volume** and matched **30B+ orders** 24/7 at **~10ms average latency**.
- **Multi-asset collateral.** Designed and shipped support for a broader range of collateral assets in perpetual contract trading, expanding platform flexibility and growing eligible TVL.
- **Isolated margin mode.** Built isolated margin trading alongside the existing cross-margin engine, giving traders granular risk control per position.
- **Trader vaults.** Delivered trading vaults that let professional traders run strategies with staked user capital, creating a new on-platform yield product and driving TVL growth.
- **System vault & auto-liquidations.** Engineered a protocol-owned vault that automates position liquidations to manage system-level risk, with realized profits streamed back to the community.
- **Protocol token utility.** Integrated the protocol token as a trading-fee payment method with built-in discounts, increasing on-platform token demand.
- **Subaccounts.** Shipped subaccount management so traders can run parallel strategies under a single profile with isolated balances and positions.
- **Platform extensions.** Built an in-platform cross-asset swap for seamless movement between collateral and trading assets, plus client SDKs enabling programmatic and third-party integration with the exchange APIs.

Unibot

United States (Remote)

PROJECT MANAGER / Python, Solidity, MongoDB, Firebase

May 2024 - Sep. 2024

- **Team leadership.** Led a team of 5 engineers to build a decentralized trading application that reached **\$1.1B in total trading volume**, **\$2M in daily volume**, and **5,000+ DAU**.
- **Full delivery lifecycle.** Drove design-to-deployment on a Kanban cadence, coordinating backend, smart contracts, and infrastructure.
- **Hands-on engineering.** Contributed directly to system design and high-leverage features, keeping latency and reliability in line as the user base grew.

Kyber Network

SOFTWARE ENGINEER / *Go, Python, Rust, Solidity, Apache Airflow, Google Cloud*

Hanoi, Vietnam

Jun. 2022 - Mar. 2024

- **Limit Order service.** Designed and built the Limit Order backend from the ground up for KyberSwap, handling millions in cumulative trading volume on the DEX Aggregator.
- **DEX Aggregator.** Optimized the routing algorithm and expanded integrated liquidity sources to **\$1B+ across 12 chains**, improving execution quality for end users.
- **User growth.** Shipped user profiles, notifications, campaigns, and reward systems that drove **>10x MAU growth** on KyberSwap (**8K → 118K** in one year).
- **High-performance math library.** Authored a 256-bit signed-integer math library in Go with operations **3x–96x faster** than the standard library, used across price-impact and routing computations.
- **Multi-chain work.** Shipped Solana smart contracts in Rust and maintained Python Airflow pipelines powering analytics and aggregator data needs.

Beincomm

SOFTWARE ENGINEER INTERN / *TypeScript (NestJS), PostgreSQL, Redis, Apache Kafka*

Ho Chi Minh City, Vietnam

Sep. 2021 - May 2022

- **News feed APIs.** Built APIs for the Beincom social network’s feed service, supporting core read/write paths for user content.
- **Notification system.** Implemented a Kafka-driven notification pipeline that consumes feed events and fans out timely push notifications, boosting user engagement.

SotaTek

BLOCKCHAIN ENGINEER INTERN / *Go (Cosmos SDK), Solidity*

Hanoi, Vietnam

Jan. 2021 - Sep. 2021

- **Layer 1 blockchain.** Contributed to a Layer 1 chain built on the Cosmos SDK for a Taiwanese client, working across consensus-adjacent modules and chain tooling.
- **Staking smart contracts.** Developed Solidity smart contracts for a crypto staking application for a Malaysian client, covering reward accounting and user-facing stake/unstake flows.

EDUCATION

VNU University of Engineering and Technology

Cumulative GPA: **3.79 / 4.00**

B.S. IN INFORMATION TECHNOLOGY, HONOR PROGRAMME, HIGHEST DISTINCTION

Aug. 2019 - Jun. 2023

Hung Yen High School for the Gifted

SPECIALIZATION IN MATHEMATICS

Sep. 2016 - May 2019

SKILLS

Languages

Go, Python, Solidity, Rust, TypeScript, C/C++

Infrastructure

PostgreSQL, Redis, Apache Kafka, NATS, Kubernetes, AWS, MongoDB, Temporal

Blockchain

EVM, Solana, Cosmos SDK, Perpetuals & margin systems, DeFi protocol design

AWARDS & HONORS

- **VNU Academic Excellence Award**, Top 3 GPA (May 2021)
- **ICPC Vietnam National Programming Contest**, Second Prize (Nov. 2020)
- **Vietnam National Olympiad in Informatics**, Second Prize (Feb. 2019)
- **Hung Vuong Informatics Summer Camp**, Gold Medal (Jul. 2018)
- **Northern Delta and Coastal Areas Informatics Competition**, Silver Medal (May 2018)
- **Vietnam National Olympiad in Informatics**, Third Prize (Feb. 2018)

LANGUAGES

- **English**, Professional Working
- **Vietnamese**, Native
